# Slatz Nameboard
Fitting Instructions

Package Contents:

Slatz Nameboard (Fully Assembled)
4 x Screws and Wall Plugs
1 x Slatz Key

1) Using the Slatz Key Provided, remove the top and bottom nameplates from your nameboard to locate the four pre drilled Holes in the framework.

2) Position the Nameboard in location and make a surface mark/spot where the holes need to be drilled. (you may need help holding the nameboard in place whilst marking)

3) Drill a suitable size hole to allow for the wall plugs to fit snugly. (we recommend drilling into the brick rather than into the mortar if installing on a brick wall)

4) Push all four plugs into the wall firmly, you may need to tap in with a hammer to ensure a flush fit.

5) Realign the frame over the holes and tighten each screw. (again you may need help holding the nameboard in place whilst doing so)

6) Once all four screws are tightened push the nameplates back into their original place on the nameboard, which will then conceal the fixings used.

7) Your nameboard should now sit proudly on display.
